

Features:

- Universal AC input / Full range
- Auto switch when power off (UPS function)
- Built-in constant current limiting circuit
- Alarm signal for AC OK and Battery low (TTL open collector output or Relay contact output)
- Protections: Short circuit / Over load / Over voltage **Brown-out (Low AC Input Voltage) Battery low protection Battery polarity protection** (by Resettable Fuses)
- Cooling by free air convection
- High efficiency, long life and high reliability
- Withstand 2G vibration test
- All using 105°c long life electrolytic capacitors

• 3 years warranty

Note	1. All parameters NOT specially mentioned are measured at 230VAC input, rated load and 25°C of ambient temperature. 2. Ripple & noise are measured at 20MHz of bandwidth by using a 12" twisted pair-wire terminated with a 0.1uf & 47 uf parallel capacitor. 3. Tolerance: includes set up tolerance, line regulation and load regulation. 4. Line regulation is measured from low line to high line at rated load. 5. Load regulation is measured from 10% to 100% rated load. 6. The power supply is considered a component which will be installed into a final equipment. The final equipment must be re-confirmed that it still meets EMC directives. 7. Length of set up time is measured at cold first start. Turning ON/OFF the power supply very quickly may lead to increase of the set up time.										

8. The total power output can not exceed the rated power, max. output current is each channel.

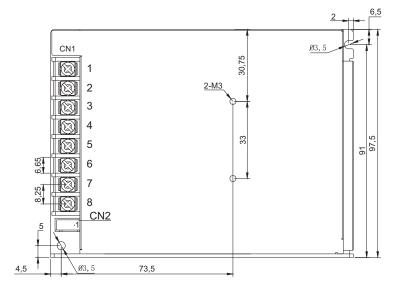

10.Do not connect the GND port with B- port in your application to prevent any damage of the product.

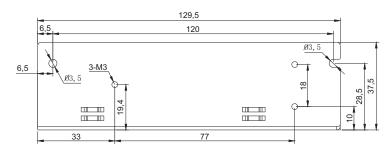

9.CH2:Battery discharge current can not exceed 50% of the rated power.

Mechanical Specification

Unit:mm

Terminal Pin No. Assignment(CN1)

Pin No.	Assignment	Pin No.	Assignment
1	AC/L	5	DC output VO+
2	AC/N	6	BAT+
3	FG≟	7	BAT-
4	DC Output GND	8	DC/DC Output +5V (GB/LB only)

QE-75-G/L

Alarm output Connector(CN2): JST B3B-XH or equivalent

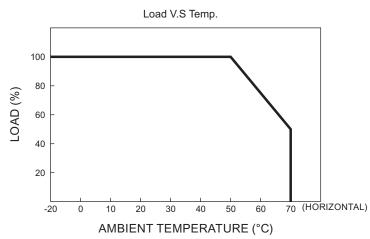

Pin No.	Assignment	Mating Housing	Terminal
1	AC OK		
2	BAT LOW	JST XHP-3	JST SXH-001 T-P0.6
3	G (13.8V/20mA) L (27.6V/20mA)	or equivalent	or equivalent

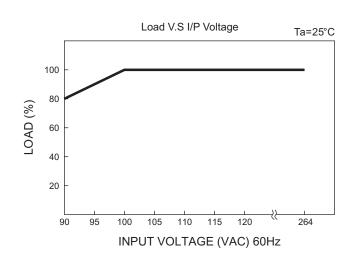

QE-75-GB/LB

Alarm output Connector(CN2): JST B4B-XH or equivalent

Pin No.	Assignment	Mating Housing	Terminal
1 2	AC OK	JST XHP-4	JST SXH-001 T-P0.6
3 4	Bat. Low	or equivalent	or equivalent

■ Block Diagram

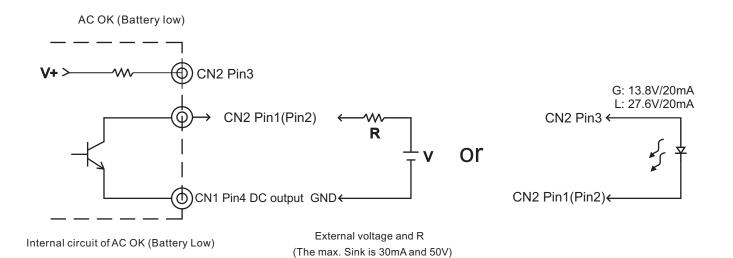

■ Alarm Signal for AC OK and Battery Low

- (1) Alarm Signal is sent out through "AC OK " & " Battery Low " pins.
- (2) An external voltage source is required for this function. The maximum applied voltage is 50V and the maximum sink current is 30mA.
- (3) Table 3.1 explain the alarm function built-in the power supply

Function	Description	Output of alarm		
AC OK	The signal is "Low" when the power supply turns on	Low (0.3V max. at 30mA)		
ACOR	The signal turns to be "High" when the power supply turns OFF	High or open(External applied voltage 30mA max.)		
Battery	The signal is "Low" when the voltage of battery is under G:12V , L:22V	Low (0.3V max. at 30mA)		
Low	The signal is "High" when the voltage of battery is above G:12V , L:22V	High or open(External applied voltage 30mA max.)		

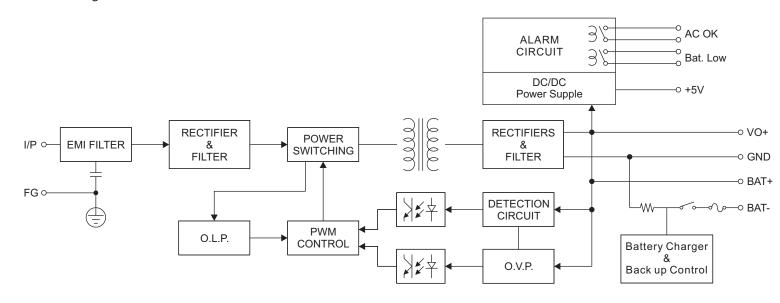

Table 3.1 Explanation of Alarm Signal

■ For QE-75-GB/LB

■ Block Diagram

- Alarm Signal for AC OK and Battery Low
- (1) Alarm Signal is sent out through "AC OK " & " Battery Low " pins. (relay contact type)
- (2) An external voltage source is required for this function. The maximum applied voltage is 30V and the maximum sink current is 1A.
- (3) Table 4.1 explain the alarm function built-in the power supply

Function	Description	Output of alarm		
AC OK	The signal is "Low" when the power supply turns on	Low or short		
ACOR	The signal turns to be "High" when the power supply turns OFF	High or open(External applied voltage 1A max.)		
Battery	The signal is "Low" when the voltage of battery is under GB:12V, LB:22V	Low or short		
Low	The signal is "High" when the voltage of battery is above GB:12 , LB:22V	High or open(External applied voltage 1A max.)
